

ABSTRACT OF THE DISCLOSURE

A basket mold and a method of making a basket mold for fabricating handwoven wooden baskets and, in particular, to a multi-part mold for shaping the basket. The multi-part mold is made up from a plurality of mold sections held together in a desired shape and orientation by a fastener. The multi-part mold may be in the form of a system for molding baskets of varying sizes specifically by adding additional mold sections to the multi-part mold, or subtracting mold sections from the multi-part mold in order to respectively increase or decrease the size of the mold, and hence the basket woven thereupon.
